ABT-TRAC STABILIZATION AT-REST DEMO

This video shows the effectiveness of TRAC Stabilizers both underway and at rest (STAR) during a sea trial.

ABT-TRAC Stabilization At Rest, is a marine stabilizer system that significantly reduces vessel roll while anchored, on a mooring, or while drifting on any vessel. TRAC-Star is a feature that can be added to most existing TRAC stabilizers and is available as an option on all new ABT TRAC systems.
